

CASE STUDY

Meeting Closure Assistant

From meeting notes to a clear answer: what still needs to be settled before people leave?

THE PRODUCT PROBLEM

A conventional summary records what was said. It may not identify **which unresolved issue blocks the meeting from closing**, or distinguish it from work that can safely continue afterward.

EXAMPLE MEETING USED TO TEST THE PRODUCT

To test this app, I wrote a **fictional meeting** between Alice, Bob and Carol. Their team is preparing to release **another AI assistant** as a beta: an early version for a small group of users.

They plan to launch **next Friday** if Bob's final tests pass on Thursday. Carol owns the landing page and feedback tracker. The beta will be free; Alice will revisit long-term pricing next Monday.

One question is still unanswered: if Thursday's tests fail, who decides whether to postpone the launch? No one has been assigned to make that decision.

INPUT / MEETING CONTEXT + TRANSCRIPT

1. Meeting Context

Meeting Type

Product / Decision Meeting

Meeting Goal

Decide whether to launch the AI assistant beta next Friday, confirm the remaining launch tasks and their owners, and identify any issues that must be clarified before the meeting ends.

Agenda

1. Review beta launch readiness.

2. Confirm the beta launch date and conditions.

3. Assign owners and deadlines for remaining tasks.

4. Discuss beta pricing and longer-term pricing strategy.

2. Meeting Transcript

Paste meeting notes or transcript

Alice: Thanks, everyone. Our goal today is to decide whether we can launch the AI assistant beta next Friday. Let's start with readiness.

Bob: The core features are implemented. We still need to finish the final regression testing on Thursday. If the tests pass, the product should be ready for Friday.

Alice: Great. Are we all comfortable targeting next Friday, provided the final tests pass?

Carol: Yes, that works for me. I can finish the landing page by Wednesday.

PRODUCT FLOW

STEP 02 / CLOSURE CHECK

Before Ending This Meeting

In this test, the assistant identifies what the team should clarify before leaving: **who decides whether to postpone the beta launch if Thursday's tests fail?**

Before Ending This Meeting

Address these items before ending the meeting.

1. Clarify who makes the final decision about postponing the beta launch if Thursday's regression tests fail.

Agenda Review

Completed	Unresolved	Missing
Review beta launch readiness Core features are implemented, final regression testing is scheduled for Thursday, and the landing page is due Wednesday; readiness status was reviewed and established. Confirm the beta launch date and conditions The team confirmed a target launch for next Friday, conditional on successful final regression testing on Thursday. Discuss beta pricing and longer-term pricing strategy The team agreed the invited beta will be free and deferred long-term pricing pending feedback and a recommendation for next Monday's meeting.	Assign owners and deadlines for remaining tasks Most tasks were assigned, but responsibility for deciding whether to postpone launch if Thursday's tests fail remains unassigned and was explicitly noted as needing clarification before wrap-up.	None identified

WHAT THE TEST SHOWED

The AI points out that **nobody** was assigned to **decide whether to delay Friday's launch if testing fails**. This needs clarification before the meeting ends.

DESIGN PRINCIPLE

Long-term pricing is still open, but **Alice will propose a plan next Monday**. It has an owner and a follow-up, so the team need not finalize it today.

IMPLEMENTATION

Python + Streamlit; one DeepSeek API call; cloud deployment. Secrets are not in the public repo.

VALIDATION & NEXT STEPS

Manually tested on one designed scenario. No measured accuracy or user outcomes. Next: broader cases, repeatability and feedback.

Figure 2. Actual output: closure guidance and agenda status.

STEP 03 / MEETING SUMMARY

A record the team can act on

After the closure check, the product consolidates decisions, owners, deadlines and remaining risks.

Meeting Summary

Key Decisions

- Launch the AI assistant beta next Friday, conditional on successful final regression testing on Thursday.
- Make the invited beta free.
- Defer long-term pricing until initial feedback is collected, with a recommendation for next Monday's meeting.

Action Items

Action	Owner	Deadline
Finish final regression testing and share results	Bob	Thursday afternoon
Finish the landing page	Carol	Wednesday
Prepare a feedback tracker	Carol	Friday
Collect initial feedback and prepare a long-term pricing recommendation	Alice	next Monday's meeting
Clarify who makes the final decision about postponing the launch if Thursday's tests fail	Not specified	before wrap-up

Risks / Unresolved Issues

- If Thursday's regression tests fail, the beta launch may need to be postponed.
- No owner is assigned to decide whether to postpone the launch if Thursday's tests fail.
